

Hands-on with the Nano-World: Atomic Force Microscopy in Practice

Are you a Master or PhD student in the natural sciences interested in exploring the nanoworld through hands-on experimentation? Then apply for this Blended Intensive Program (BIP) jointly offered by the Universities of Bologna (Italy), Chemnitz (Germany), and Babeş-Bolyai (Romania).

This BIP course offers:

- A comprehensive online learning platform introducing the fundamentals of atomic force microscopy and nanoscience
- A one-week on-site laboratory course in Bologna, from 8–12 June 2026
- Official academic recognition by your home university, awarding 3 or 5 ECTS (CFU) depending on your prior background
- A truly international learning experience: work in multidisciplinary teams with students from partner universities to tackle exciting experimental challenges at the nanoscale
- Erasmus+ funding covering travel and accommodation costs in Bologna

If this opportunity matches your interests, visit the program website and contact your local coordinator to apply for the BIP.
